Response to Request for Direction on Changed Disposition Plan for Resource Conservation and Recovery Act/Polychlorinated Biphenyl Problematic (Orphan) Waste Stream

Gregg A. Crockett
Director of Administration and Chief Financial Officer
Kaiser-Hill Company, LLC

Reference: Gregg A. Crockett letter to Charles A. Dan, Jr., dated July 19, 2005, subject: Same as above

The referenced letter requested Department of Energy/Rocky Flats Project Office (DOE/RFPO) "direction on disposition of two remaining drums of Resource Conservation and Recovery Act/Polychlorinated Biphenyl (RCRA/PCB) orphan waste." The planned disposition path for this material was treatment at the Toxic Substances Control Act Incinerator (TSCAI) in Oak Ridge, Tennessee. In the reference, the Kaiser-Hill Company, LLC (K-H) indicates that the State of Tennessee has not approved this waste stream for treatment at the TSCAI. However, on August 3, 2005, the State of Tennessee subsequently approved this waste stream for treatment at the TSCAI. The two drums of waste were shipped to the TSCAI on August 9, 2005, prior to the K-H deadline for closing the 750 Pad RCRA storage area to avoid impacting the closure date.

In light of the fact that the two drums of orphan waste have been shipped to the TSCAI for treatment in accordance with K-H's original disposition plans, the DOE/RFPO direction requested by K-H is no longer required.

The DOE/RFPO has been informed that all waste streams previously identified as "orphans" have been shipped offsite for treatment and disposal. The K-H Team has worked diligently with the DOE, other DOE sites, and commercial vendors to ensure that the approximately 5,000 cubic meters of "orphan" waste identified when the closure contract was signed were safely and compliantly shipped offsite for treatment and disposal. The DOE/RFPO commends the K-H Team for this significant accomplishment.
